PROFILE

CSE undergraduate currently learning and exploring app and web development with hands-on experience in building projects using Flutter, ASP.NET Core Web API, SQL, and modern development technologies.

EDUCATION

Bachelor of Technology in Computer Science and Engineering, 2022 – Present
Islamic University of Science and Technology (IUST), Awantipora
GPA: 8.6

Class XII, Mallinson Girls School, Sheikh Bagh , Srinagar
Percentage: 97.2%

SKILLS

Programming Languages C, C++, Python, C#	Backend ASP.NET Core Web API, ASP.NET MVC, REST APIs, SQL Server
ML and Data Science Pandas, Numpy, Matplotlib, Scikit-learn	Data Analytics SQL, Excel, Power BI
Frontend/App HTML ,CSS , Bootstrap , JavaScript , Flutter	

INTERNSHIPS

Machine Learning Intern, National Institute of Technology (NIT) Srinagar, India 01/2025 – 02/2025

- Completed a Machine Learning internship focused on real-world data using Python and scikit-learn.
- Built a project on Disaster-Resilient Housing Risk & Cost Optimization involving data preprocessing and model evaluation.

Data Analyst Intern (Project-Based Training), Trainity 11/2024 – 12/2024
Remote

- Completed an 8-week Data Analytics training program with a live industry project on social media user engagement analysis. Applied SQL and dashboard tools to analyze datasets, extract insights, and present findings through data-driven storytelling.

PROJECTS

Cognifind - Smart Indoor & Outdoor Navigation System, IUST - Ongoing .NET 8 , PostgreSQL , ML, FLUTTER

- Developed a hybrid navigation system using Flutter, .NET Web API, and PostgreSQL, implementing A*-based indoor routing and a custom campus map.
- Currently enhancing the system with BLE-based indoor positioning for improved accuracy.

Disaster-Resilient Housing Risk & Cost Optimization, NIT Srinagar Python, ML, Visualization

- Built ML models to assess disaster vulnerability and recommend cost-effective construction materials.
- Used research-based synthetic data with environmental and material features.
- Applied Random Forest for risk prediction and Linear Regression for cost estimation.
- Visualized insights to support data-driven housing design decisions.

AI Interview System (ASP.NET Core Web API) C#, ASP.NET Core Web API , SQL Server, NLP

- Built a backend system for resume analysis and interview simulation
- Implemented JWT authentication and secure REST APIs
- Developed NLP-based skill extraction, resume scoring, and job recommendation features
- Generated interview questions based on candidate skills

WSWB – Women’s Safety Smart Wristband, College on Wheels Program, University of Jammu Arduino, Iot Sensors, GPS, Embedded C

- Designed an IoT-based women safety wearable using GPS and GSM for real-time SOS alerts and live location sharing.
- Implemented sensor-based verification to minimize false alarms.
- Selected among Top 12 projects in the College on Wheels innovation program at University of Jammu.
